Objective

Enthusiastic IT student with foundational knowledge of Java, MySQL, DevOps, and Web Development. Currently working as an AI/ML intern and seeking entry-level opportunities to learn modern technologies while contributing to real-world projects.

Skills

Languages: Java, Python, JavaScript, Shell Scripting

Technologies & Tools: React.js, FastAPI, Docker, GitHub, Linux, AWS

Databases: MySQL, MongoDB

Education

Datta Meghe College of Engineering, Airoli

B.E. in Information Technology

2022 – 2026

CGPA: 7.89/10

Upadhye College of Science, Nashik

Higher Secondary Education

2022

Percentage: 84.83%

Work Experience

ACPL Cargo Pvt. Ltd

AIML Intern

Jan 2026 – Present

- Built an **AI-based POD verification** system by creating labeled datasets using LabelImg and trained a YOLO-v8s model to automate document verification, reducing manual effort by 60
- Developed **ASKHR**, an AI-powered HR assistant using LangGraph to automate onboarding, issue reporting, and gatepass requests through an LLM-based chatbot
- Integrated RAG for policy retrieval using MiniLM-L6-v2 (Hugging Face), ChromaDB and Easy-OCR to extract and query information from lengthy company policies

Projects

PredictOps – AI Server Monitoring & Failure Prediction | *FastAPI, PostgreSQL, React.js, LSTM*

[GitHub]

- Built an AI-powered system to monitor server metrics and predict failures and reducing downtime
- Implemented LSTM-based deep learning model for anomaly detection to capture temporal patterns in real-time data.
- Developed LSTM-based deep learning models to forecast server metrics 30–60 minutes ahead.
- Integrated SHAP-based explainability to interpret model predictions and highlight key contributing metrics.

DebateArena – AI-Powered Real-Time Video Debate Platform | *WebRTC, React.js, Firebase, Docker, AI*

[GitHub]

- Built a real-time peer-to-peer video debate platform with live transcription and AI-based fact checking.
- Implemented low-latency video streaming using WebRTC with real-time data synchronization via Firebase.
- Integrated speech recognition and AI-based analysis to verify statements during debates.
- Designed a responsive UI and Dockerized the application to ensure consistent deployment.

JobVoyage – Job Portal Website | *MERN Stack, Machine Learning*

[GitHub]

- Developed a full-stack MERN-based job portal with separate dashboards for recruiters and job seekers
- Implemented a Random Forest machine learning model to recommend personalized jobs with 85% accuracy
- Built secure RESTful APIs using Express.js and MongoDB with JWT-based authentication
- Added real-time notifications and advanced job filtering using WebSockets and email alerts

Achievements & Extracurricular Activities

- **Runner-up at Hackhive 2025 Hackathon** : Built an **AI Research Assistant** for fast and accurate understanding of research papers using RAG with Supabase pgvector embeddings and GenAI. Enabled semantic search across multiple papers with context-aware answers and voice-based queries using Python Flask.
- **Video Editing Competition Winner**: Secured first place twice in college-level video editing competitions for creative storytelling and editing skills.
- **Member of Tech GITS – Technical Committee**: Active member of the college technical committee, contributing to the organization of workshops on emerging technologies.
